Associate

# Tony Curtis

Technologist, GenAI, Futurology, and sometimes I do some  
networking and security things

Charlotte, North Carolina, United States

## Summary

Since kicking off my IT journey in 1997, helping people navigate the early days of internet dial-up, I've seen and pretty much done it all in the world of network, security, and wireless tech. My adventure into network automation started with a Perl script back in 2008, and oh, how things have changed since then! Now, I'm all about Python, Ansible, and now GenAI, diving deep into automation and constantly looking for ways to make things more efficient and, frankly, cooler.

I've worn quite a few hats over the years – from being the go-to person for desktop issues, managing servers, wrangling databases, to architecting complex networks. These days, I'm a Presales Sr Solution Architect, which means I get to play with the big-picture stuff, developing new services and making sure our delivery game is strong, especially when it comes to network automation.

I'm super excited about the potential of General AI and how it's transforming our field. Mixing AI with automation? That's the future, and I'm here for it. I'm eager to step into more of a leadership role, guiding teams and projects that are as passionate about this tech as I am.
